NATURAL STONE THIN VENEER

DELTA STONE NATURAL STONE THIN VENEER

Natural Stone Thin Veneer is simply real stone cut thin. By taking the traditional full bed depth building stone (3-5" thick) and cutting 3/4" to 1-1/4" off the face, we are able to provide a thin, natural stone alternative to manufactured stone. The thin natural stone provides the aesthetics of the full bed depth veneers while allowing it to be similar in cost and installation to manufactured stone.

Natural stone thin veneer is ideal for interior and exterior use. Corner pieces are cut in L-shaped dimensions to resemble full veneer. Thin veneer is available in a variety of colors and stone types including limestone, sandstone, quartzite, quartzitic sandstone and granite.
